

Cinder guide: Set your launch password

1. Open Cinder. The first screen asks you to create a launch password.
2. Type a strong password. The strength check tells you if it's too weak.
3. Confirm it, then tap **Seal and open**. This password encrypts everything Cinder stores. There is no reset. If you forget it, the data can't be recovered.
4. Next time, enter the same password to unlock. Wrong guesses add a growing delay.
